

The Food Chain

Catherine Brentnall

Verse 1

Life is all around us,
Open your eyes, what do you see?
People, animals, trees and plants,
And all these things need energy.
Energy to live, energy to grow,
So where does it come from? Do you know?

Chorus

Plants get their energy from the Sun,
Then a slug eats the plant and a chain has begun,
A bird eats the slug, a cat eats the bird,
This is how energy is transferred.
It's a food chain, a sequence that shows,
Who eats who, and where the energy goes,
A food chain.

Verse 2

Plants are known as producers,
Making their food, using sunshine.
Animals are consumers,
On animals and plants they dine.
All along the chain, energy it flows,
As predators eat prey, the chain grows.

Chorus

Plants get their energy from the Sun,
Then a slug eats the plant and a chain has begun,
A bird eats the slug, a cat eats the bird,
This is how energy is transferred.
It's a food chain, a sequence that shows,
Who eats who and where the energy goes,
It's a food chain, a sequence that shows,
Who eats who and where the energy goes,
A food chain.
